

## **ATRIDOX Treatment**

Follow these instructions for home care after ATRIDOX treatment

- Do not floss the treated area for ten days.
- Your hygienist may describe or recommend an oral rinse to use during the ten days following ATRIDOX application.
- Do not be alarmed if small amounts of ATRIDOX are dislodged. ATRIDOX is harmless if swallowed.
- As your gums heal and swelling begins to subside, they may recede a bit and you may notice some “white material” at the gumline. It is the ATRIDOX your hygienist applied and most of it will dissolve and be absorbed within 28 days.
